

Discovery Call

A conversation about your business, your idea, and what technology should actually do about it.

BUILD · IMPROVE · GROW

[NUMITECHNOLOGIES.COM](https://numitechnologies.com)

INTRODUCTION

Addy
Hebou

Founder & Lead Developer, NUMI

B.S. Computer Science, NYU Tandon School of Engineering.

I build web & mobile products, internal tools, and the systems businesses run on.

- Web Applications
- Software Development
- Integrations
- Automation
- AI
- APIs
- Databases
- UX/UI

PREVIOUSLY

Snap Inc.

Software Engineer — Snapchat for Web, Ads, and internal tools. Led end-to-end web experiences and UI systems.

Sandia National Laboratories

Software Engineer — built 200+ internal web pages and raised accessibility compliance from 35% to 95%.

WHAT NUMI DOES

We help businesses **build,**
improve, and grow through
technology.

NUMI helps entrepreneurs turn ideas into digital products, and helps existing businesses modernize the way they operate.

WHO WE HELP

Wherever you are, NUMI can meet you there.

Start

"I have an idea."

Launch

"I need to turn it into a real product."

Modernize

"My business has outgrown the way we work."

Grow

"We need better technology for what's next."

OUR APPROACH

We don't start with technology.
We start with the problem.

FIRST

What are you trying to accomplish?

THEN

What's getting in the way?

ONLY THEN

What technology actually makes sense?

TODAY'S CONVERSATION

Mostly listening.

01

Understand

Your business, idea, users, and goals.

02

Explore

Problems, opportunities, workflows, and requirements.

03

Determine

What technology solution makes the most sense.

04

Next steps

What happens after today's conversation.

You'll be doing most of the talking. I'll be taking notes.

WHERE WE'LL GO NEXT

So — which one is you?

BRANCH A

I'm building something new.

An idea, an app, a product, an MVP — something that doesn't exist yet.

Start here →

BRANCH B

I already run a business.

It works, but the way it works is starting to cost you time or money.

Start here →

Both? We'll take them in order.

Let's understand what you're building.

The idea

What are you building?

What problem does it solve?

Who is it for?

The product

How does someone use it?

What does the experience look like?

What has to exist in version one?

Validation

What exists today?

Have you tested it with anyone?

What did you learn?

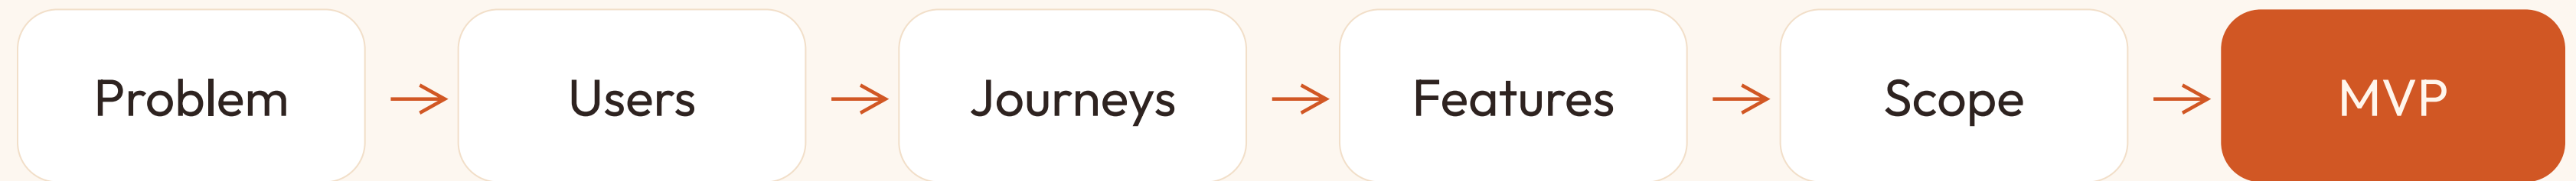

The business

How does it make money?

What does success look like?

BRANCH A · FROM IDEA TO PRODUCT

An idea becomes a plan.

After discovery, I turn what you described into a defined product: who it's for, what it does, what's in the first version, and what it takes to build.

WORTH TALKING THROUGH

What's essential, and what can wait? Do you have designs already? Anything built so far? Payments, accounts, or data we should plan for?

BRANCH A · SUCCESS

What does a successful launch look like?

What would make the first version successful?

What should customers be able to accomplish?

What do you want to learn from the MVP?

Where should the product go after launch?

[Continue to how NUMI can help →](#)

Let's understand how your business works today.

The business

What do you do?

Who are your customers?

How does the business operate?

The workflow

Walk me through the process from beginning to end.

The friction

Where does it break down?

What's still manual?

Where are you losing time or money?

The people

Who's involved?

What depends on you?

What do your team or customers struggle with?

What are you working with today?

What software and tools do you use?

What works well — and what doesn't?

Which systems need to talk to each other?

Are you entering the same information twice?

What have you already tried?

No wrong answers here. Half of this work is just seeing where the seams are.

BRANCH B · THE FUTURE STATE

What would better look like?

What would you want to stop doing entirely?

What should just happen automatically?

What would make the business easier to run?

If NUMI could solve only three things, what would they be?

HOW NUMI CAN HELP

The right solution isn't always a custom app.

Connect

Use the tools you already have, wired together properly.

Enhance

Automate, integrate, and extend what's already working.

Build

Create custom software when the right solution doesn't exist yet.

A LEGITIMATE NUMI SOLUTION

Shopify + Calendly + Stripe + automation

ALSO A LEGITIMATE NUMI SOLUTION

Custom web application + database + APIs

We choose the technology based on the problem — not the other way around.

THE DELIVERY PROCESS

From idea or problem to working solution.

Discover

Understand the business or product.

Define

Requirements, scope, priorities.

Design

Experience, workflows, interface.

Architect

Decide the technical approach.

Implement

Connect, configure, enhance, or build.

Test

QA and your acceptance.

Launch

Deploy, train, hand off.

Care

Support and keep improving.

CONNECTING EXISTING TOOLS

Discover → Define → Design → Implement → Launch → Care

BUILDING A CUSTOM PRODUCT

Every step, in full

Not every project needs every step. The method flexes to the solution.

WHAT HAPPENS NEXT

A clear path forward.

01

We review

I go through everything we learned today.

02

We recommend

Highest-impact opportunities and the right solution.

03

We present

A proposal with scope, timeline, and investment.

04

We implement

Once approved, we kick off and begin the work.

05

We launch & support

Launch, train your team, and stay available as you grow.

No pressure. No commitment. Just a clear path forward.

Let's build something
better.
